Professional Summary

Data Analyst with 2+ years of experience specializing in data intelligence and statistical modeling. Proven track record at NSDC and VIVO Mobiles of managing datasets and driving a 4.5% YoY improvement in resolution efficiency through SQL-based performance modeling. Technically proficient in Python and ETL pipelines, with a strong foundation in Machine Learning—including building supervised and unsupervised ML models with end-to-end deployment to cloud services.

Technical Skills

Languages: Python, SQL

Frameworks & Libraries: Scikit-Learn, Hugging Face, Keras, Pandas, NumPy, Matplotlib, Plotly, FastAPI

Cloud & MLOps: AWS(SageMaker, EC2, S3, Lambda), Docker, CI/CD, Git/GitHub

Databases & Tools: PostgreSQL, MySQL, MongoDB, Power BI, Excel, VS Code

Experience

National Skill Development Corporation

April 2024 – Working

Data Analyst

New Delhi

- Boosted resolution efficiency by 4.5% YoY by engineering SQL-based performance models to analyze 60K+ historical CRM records and identify bottleneck trends.
- Reduced reporting time by 40% by architecting scalable ETL workflows that transformed disparate SQL/NoSQL data into optimized Power BI models with automated validation checks.
- Improved SLA compliance to 93% by performing exploratory data analysis (EDA) on high-volume JIRA datasets and implementing statistical prioritization models to resolve friction points

VIVO Mobiles India Limited

August 2021 – January 2022

Research Engineer

Delhi NCR

- Increased operational output by 4% through the design and standardization of quantitative KPI metrics derived from historical performance trends.
- Accelerated executive decision-making for 20+ senior stakeholders by developing dynamic Excel dashboards utilizing advanced lookups, pivot tables, and slicers.
- Achieved a 50% increase in process implementation rates by leading Kaizen initiatives based on Root Cause Analysis (RCA) and statistical gap analysis of existing bottlenecks

Projects

Credit Default Risk Prediction Model | Python, XGBoost, SHAP

December 2025

- Achieved 0.78 AUC-ROC and 76% accuracy in predicting customer default probabilities by architecting a supervised learning pipeline using XGBoost on structured financial data.
- Improved model robustness and captured granular spending volatility by engineering 15+ complex features, including Credit Utilization Ratios and Payment-to-Balance trends.
- Enhanced model robustness by integrating Explainable AI (SHAP) to isolate key risk drivers like payment delays and credit utilization spikes, providing transparency into "Black Box" predictions.

Used Car Price Prediction Engine | Python, Linear Regression, Docker, AWS

November 2025

- Architected an end-to-end regression pipeline to estimate used car market values, benchmarking 5+ algorithms (including Random Forest and XGBoost) to achieve a best-in-class R^2 of 0.93 and MAE of Rs.105,000
- Optimized hyperparameters using Grid Search Cross-Validation to minimize Root Mean Squared Error (RMSE), ensuring robust generalization across different vehicle segments (Sedan, SUV, Hatchback)
- Deployed the solution as a microservice using Docker and AWS, implementing CI/CD workflows to ensure seamless integration and reproducible production environments.

Education

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Science in Electronics and Communication Engineering

July 2018 – July 2022

Lucknow, U.P. - India

Interests / Extracurricular

- Agentic AI: Actively exploring autonomous multi-agent workflows and Large Action Models (LAMs).
- National-Level Athlete: Represented state in Shooting & Basketball, demonstrating high-performance discipline.
